

MONTHLY REPORT OF RIVER AND FLOOD CONDITIONS

REPORT FOR:

MONTH

January

YEAR

2002

SIGNATURE

Michael Decker

In Charge of HSA

DATE

February 10, 2001

TO: Hydrometeorological Information Center, W/OH2
 NOAA / National Weather Service
 1325 East West Highway, Room 7230
 Silver Spring, MD 20910-3283

When no flooding occurs, include miscellaneous river conditions, such as significant rises, record low stages, ice conditions, snow cover, droughts, and hydrologic products issued (WSOM E-41).

☒ No flood stages were reached in this HSA for the month above.

Most areas in the San Angelo HSA received below normal precipitation during the month of January. No significant runoff occurred. The threat of river flooding is low.

The heaviest amounts occurred on the 30th into early on the 31st as warm air overrode a cold front. Amounts of 1 to 3 inches occurred east of a Junction to Richland Springs line. Areas elsewhere received less than 1/3 inch. Light amounts of precipitation also occurred on the 1st, 4th, 5th, 23rd and 24th. The most memorable of these was the 3 to 4½ inch snow that fell in a narrow band on New Years Day, extending from Northern Irion County eastward across the city of San Angelo...and then into extreme northern Concho and southern Runnels counties. For the month of January, Abilene received 0.47 inches...or 0.50 inches below normal. San Angelo had 0.32 inches...or 0.49 inches below normal.
